Dated 1st February 1950.

The storage level of the Krishnarajasagara Reservoir 14th January 1950 was 72·24 feet as against 103·11 feet the corresponding date of the previous year. Allowing Madras issues, which is inevitable, the level is expected to at about 67 feet by the end of February 1950. This heig will not force any water into the Visvesvaraya Canal. Her no supply of water is at all possible to the areas under Visvesvaraya Canal beyond 21st February 1950. This is most unfortunate situation which has arisen owing to failu of adequate rains in the Cauvery basin last monsoon. It very necessary therefore that the raiyats who have cro under the Visvesvaraya Canal should take immediate ste to protect their crops by sinking wells and making use of irrigation.
